

STAIR RISER

Risers are the boards that form the vertical face of each step, creating the “toe kick” area between the stair treads. For updating carpeted or worn out stairs. Easy glue down installation. Cost effective way to add value to your home.

BENEFITS

- An easy to install, durable stair covering for updating risers
- Easy glue-down installation
- Cost-effective way to add value to your home
- Installs over existing risers
- Primed Poplar
- White with smooth finish
- Can be cut to fit many sizes of existing stair riser

BASIC INSTALLATION INSTRUCTIONS

PREPARE

1. Gather all of the tools listed.
2. Start by removing any carpet, pad and staples from your existing staircase.
3. Vacuum the staircase and make sure it is free of debris.

MEASURE

Measure for risers only after the tread has been installed.

- a. Cut down the width of risers with a sliding compound miter saw.
- b. Use a table saw (or circular saw with a guide) to make any alterations to the height of the riser that runs along the entire length of the product.

8. Use Heavy Duty Liquid Nails or any Urethane Construction adhesive. Apply about an 1/4" thick bead around the perimeter and then throughout the middle in a zig-zag shape on the back of the riser as previously shown and adhere riser to staircase.

ADHESIVE PATTERN

SKU: USC02-00001

SPECIFICATIONS:

47" length x 7.37" width
Color: white
Thickness: .56"
3 risers per carton

TOOLS AND MATERIALS:

-  Table saw with carbide-tipped blades or hand saw
-  Tape measure
-  Scraper
-  Gloves
-  Safety Glasses
-  Urethane-based construction adhesive
-  Hammer
-  Vacuum
